

Precision Gate Rollers

Model FS-3500

The FS-3500 cantilever gate roller is designed for gates with an opening size up to 30 feet. This roller fits ornamental iron gate frames of 2 inch square.

This model uses permanently lubricated sealed ball bearings for maintenance free operation. One bearing is installed on each side of the roller. This roller is load rated up to 2200 lbs.

The roller is made of Graphite impregnated nylon and is self lubricating on gate frames. They are precision machined for smooth operation. Typically these rollers require 60% less effort to move a gate versus using cast iron rollers.

Our chassis is made of 3/8 inch formed steel which is welded and then hot dip galvanized to prevent rust.

The shaft is a one inch grade 5 bolt with a nylon imbedded lock nut. No snap rings to pop off or cotter pins to shear.

Mount sizes available for 3inch, 3 ½ inch, 4inch, 4 ½ inch, 6 5/8 inch, and 8 5/8 OD pipe. Also available are mounts for 3inch, 4 inch, and 6 inch square posts.

This product is proudly manufactured in the U.S.A.

Our products are available thru wholesale fence material suppliers.
