Aluminum Enclosed Track Systems

This is our new heavy duty 8 roller aluminum track trolley. The mounting bolt is a rod end that self levels the trolley in relation to the to the aluminum track assembly. This allows smoother gate operation and roller efficiency. The chassis is made of forged stainless steel.

This is our standard duty trolley. This unit is designed for gate opening sizes of 20 feet or less. It has the same features as the above trolley.

The heart of every aluminum enclosed gate track system is the track assembly. Our standard track length is 31 feet. It is extruded of high quality aluminum and then heat treated. The back flange can be easily drilled to mount to a standard pipe cantilever gate or may be welded to an aluminum frame gate. We manufacture a heavy duty extrusion to add strength to the gate. Heavier one piece extrusions are better.

Our enclosed track system comes complete with 2 trolleys, two trolley mounting brackets, one 31 foot long aluminum extrusion, and one set of bottom guide rollers with mount.
